On October 3, 2006, an application programming interface (API) was released by Autodesk in conjunction with a Web Services Platform (WSP) for accessing AutoCAD in the context of web services. The API consists of a number of Autodesk-provided Java classes (JAR files) that are not available as downloadable components. The Java API is composed of classes that provide access to various services, such as working with project information, auto-loading files, converting and editing drawings and drawing files. Users can access the services through a command line interface, using Java, or through the use of a Web Services Platform (WSP). AutoCAD's DXF, drawing exchange format, allows importing and exporting drawing information. On September 14, 2010 Autodesk added XML import and export to its "AutoCAD Parametric" add-on for SketchUp. On May 24, 2012, AutoCAD released an add-on for Microsoft Office that enables AutoCAD to be used within Microsoft Office in a web browser. Autocad features User interface A parametric solver (visual solver) is included in AutoCAD and is used to change and change the parameters of a model. The

workstation was not designed for people to edit directly. In the first few years of development it was common for an apprentice designer to learn to use the parametric solver by editing a drawing. The ability to edit directly in the drawing is now the norm. AutoCAD allows two-dimensional drawing files to be scaled, rotated, mirrored and repeated. Objects can be displayed and hidden, split and joined, the properties of an object can be changed and the properties of an object can be transferred from one object to another. Advantages Advantages include a range of functions and features that can be used within the program to create very complex or simple drawings. Excellent drawing tools AutoLISP Mesh Modelling Drawing features An integral part of the program is the ability to draw three-dimensional objects using the sketch-up or wireframe functions. Wireframes are similar to the wireframe function available within AutoCAD. They are used to define the boundary of an object as seen in 2D (top, bottom, left and right) and 3D (front, back, bottom, top). These are used to define the boundary of an object as seen in 2D (top, bottom, left and right ca3bfb1094
