Last week, Yahoo finally decided to drop their redirection service, it is now being blocked by the Internet Authority Bureau, which is an internet censorship organization of China. As soon as the redirection was dropped, people started to come up with alternatives. It is a good thing to have alternative sources to access yahoo, but I think there are some things that I want to make clear. The Yahoo messenger application (also known as "YMSG") is not related to the redirection. After a long time of using it, I would say it is the most useful yahoo messenger program because it supports video chatting, file transferring, and much more. It supports multiple different platforms including Windows, Mac, and Linux. You can download it here. For me, it is my main way to stay in touch with my friends. Yahoo's news service has two versions. The first one is their new "Mashable" service, which is a news and RSS feed aggregator service. The second one is "Mashable Pro", which is a paid subscription service. It was launched with the same prices in China as what is available in the United States, but if you are willing to pay, you will get a lot more. The advantages of "Mashable Pro" are the "Mashable Daily" and the "Mashable Weekly". You can download "Mashable Pro" here. I am writing this blog entry because I want to make you aware of my dissatisfaction towards Yahoo's decision to turn down redirection. Yahoo's decision did not affect my use of their products in the way that I expected. I am not saying that I am not satisfied with the other solutions that I mentioned, but I am sad that I cannot use their messenger or their news service, and I hope that my complaint can help other people have a better
