When I launch Visual Studio 2008 Express (SP1) for Windows 7 (64-bit) in debug mode, after some time it seems to give up and throws an unhandled exception. It appears to be some kind of memory exhaustion, and the only way to stop the problem is to close all VS instances and restart the machine. It has been happening for the last months, and it is the first time I encounter a problem like that. My machine is quite young, only 2 month old. I have tried the troubleshooting steps here, with no luck: In general: I am not the admin of my Windows 7 machine. The only administrator in the house is my wife. It may be that something has been changed on her PC, but I have no way to know. It is somewhat similar to this: Visual Studio 2008 remote debugging not working for VS2008 SP1 on Windows7 However, we have not tried that. Has anybody encountered similar problems? I don't have any 3a67dffeec

Tomio's List: Just a fun email on using a few links to help us see where our own ideas about learning are coming from and who is driving them? We are not a textbook company and don't need no stinking list and corporate marketing campaign to tell us we are there because that's the purpose of a blog, right? James's List: The tough question of what learning is and why we teach it. Why do we teach reading, writing, and math? Where do they come from? Why do we teach these skills? How and why do they make a difference in our students' lives? Do they matter? What is the point of learning? Is this the point? What do we learn in life? What does all of this mean? It means that we can look at the constructivist model to understand that it is about the design, creation, and delivery of learning. A series of learning adventures. Maybe you don't need the book, but how about the The Design of Learning Adventures? Or, maybe you don't need the whole package, but here's a
