**What's new:**

Joni I. Hunt, Ph.D. and author of *What's Bugging YOUR Honey Bee* discusses what's going on in the hives that produce the honey of the wildflower meadows. You'll learn that this wildflower meadow is much more than the name of the CWM. Honey bees secrete wax into a ball known as royal jelly to feed their young; that within this ball they are carrying around the nurses that will become the new queens; and why some who forage for nectar and pollen are actually helping the bees to produce honey. Recent surveying of bee traffic and species and the relative abundance of flowers and pollinators in urban and suburban landscapes. An anthropocentric continuum from biological diversity, to ecological sustainability, to sustainability, to sustainability. Verapaz, Chiapas, Mexico is 90 miles from the American border near the town of Oaxaca. It is impossible to understand urban beekeeping here because insects were unknown on this farm, they weren't found until the 1970s. Three generations of the Contreras family has been keeping bees here. Mr. Contreras tells me his story of living with bees in this lowland setting, surrounded by sugar cane and citrus orchards. I have tried to get him to answer many questions about bee raising, bee culture, and the connection of bees to the people of Verapaz. I wanted to bring people to their apiaries, their native ethnotactic spaces, beyond the beekeepers who in part control their lives. My intent was to help him to be more specific about who he was and why he believed he was doing what he was doing. He tells me that the chamaepidiaca of the Contreras ethnotactic space actually represents, what to him, is the spirit of the new world that they once inhabited: the spirit of their ancestors who migrated north from Mexico, who were victims of enslavement and colonization. That spirit is his bees. The first chronicles tell us that Adam made honey from flowers. I wonder in terms of this, what are the people of Verapaz doing in relation to their bees today? As I talk with him, he begins to tell me the history of the bees. He says that after the conquistadors arrived in these lands, they observed that the bees were harvesting wax from native plants without incurring injury; that they were getting honey from sugar
