Schwannomas are usually benign solitary tumours arising from a peripheral nerve sheath. They are usually sporadic and located anywhere along the length of the nerve but are most common in the head and neck area. This is the first reported case of schwannoma in the rectus sheath. A case of an incidentally detected rectus sheath tumour in a 57-year-old man is reported. The tumour was excised and the patient recovered well. The report highlights an unusual location and provides some useful information on the radiological and intraoperative appearances of this type of tumour. This invention relates generally to closure members used for various types of food containers and containers for liquid medications. More particularly, the invention relates to closures having a tamper indicating band. Various types of closures and closure members have been proposed for use in food containers and containers for liquid medications. In particular, milk bottles have been formed using closures having a single cap with a removable band. In some of the proposed designs, the band has a breakaway portion that is removed upon first opening of the closure. It is believed that the term breakaway portion refers to a portion of the band that is removed from the closure upon first opening of the closure. While breakaway bands provide some beneficial features, they suffer from certain shortcomings. For
